

Domestic Heatpumps

Domestic range 3.8kW, 5.4kW, 7,6kW and a 9.3kW

Time to brag. At first, well over 36 heat pump companies were registered with Eskom. Thirteen companies found the funding and made it through to the SABS tests. Only one company submitted all three of its domestic range of heat pump and passed first time on the Eskom and SABS tests. In short, we believe we have the highest performing heat pump range in South Africa. Currently Firefly domestic heat pumps are one of the highest selling brand of domestic heat pumps on the South African market.

SPECIFICATIONS

Our range of FFD models:

- 3.8kW has an input power of 0.91kW, a hot water yield of 82L/hr.
- 5.4kW has an input power of 1.17kW, a hot water yield of 116L/hr.
- 7.6kW has an input power of 1.77kW, a hot water yield of 163L/hr.
- 9.3kW has an input power of 2.21kW, a hot water yield of 200L/hr.

Firefly's heat pumps offers two casings of the highest quality:

- Hot galvanized steel that is coated with electrophoresis which is treated in advance for much better anti-rust and scratch-proof.
- The stainless steel casing is the best option for the near seaside with salty air or a climate with heavy humidity.

With an incredible 5 year warranty subject to annual service
